MODERN COLLEGE OF ARTS, SCIENCE & COMMERCE, GANESHKHIND, PUNE-16

A PROJECT REPORT ON

"TRAVEL EXPENSES TRACKER''

For ACADEMIC YEAR 2023-24

TY BBA(CA)

SEMESTER - V

Submitted by

PRATIK P. KAPDI

Roll No:- 233731013

SWAGAT R. DOKE

Roll No:- 233731007

Guided by:

Prof. Suwarna Mhasekar

Progressive Education Society's

MODERN COLLEGE OF ARTS, SCIENCE &

COMMERCE, GANESHKHIND, PUNE-16

CERTIFICATE

This is to certify that Shri/Smt. **Swagat R. Doke & Pratik P. Kapdi** Class **BBACA** Semester **V** has satisfactorily completed Project Entitled **"TRAVEL EXPENSES TRACKER"** as prescribed by Savitribai Phule Pune University for the academic year **2023-2024.**

Project Guide **BBA-CA Co-ordinator**

Internal Examiner **External Examiner**

ACKNOWLEDGEMENT

Acknowledgement is not a mere formality as it is the general notation. It is the only way through which we express our deep and profound gratitude to the people who directly or indirectly contribute inspiring guidance, keen interest and continual encouragement in completing this project.

We express our sincere thanks to all those who have provided us valuable guidance towards the completion of this project as part of the syllabus of the BBACA course.

We express our sincere gratitude towards our department which has provided us with valuable assistance.

We take this opportunity to extend our sincere thanks to **Prof. Suwarna Mhasekar** for her useful guidance in the making of **"TRAVEL EXPENSES TRACKER"** as a project and also in the preparation of the project report.

We are also thankful to the H.O.D of our department **Prof. Suwarna Mhasekar** for his constant enlightenment, inspiration, and motivation in making our project.

We also like to express our gratitude for our parents for their continuous support without which it would have been difficult to perform to our potential and we are also thank them for their co-operation and timely assistance and also our loved ones for their moral support.

Finally, this acknowledgement will be incomplete if we fail to thank our principal, Mr. Sanjay Kharat who provided us with all the facilities available to work on this project.

ABSTRACT

Travelling expenses can be a significant financial burden, especially for frequent travelers. Keeping track of travel expenses can be challenging, especially when traveling to multiple destinations and incurring expenses in different currencies. A travel expenses tracker can help travelers stay organized and budget their finances effectively.

This project proposes a travel expenses tracker that leverages machine learning and natural language processing (NLP) to automate the process of tracking and categorizing travel expenses. The tracker will be able to extract travel expense information from receipts, invoices, and other travel documents. The tracker will also be able will be developed as a mobile app. The app will be designed to be user-friendly and easy to use. The app will allow users to input their travel expenses manually or upload receipts and invoices to be automatically processed. The app will also provide users with insights into their spending habits and help them identify areas where they can save money.

Introduction

Introduction

A traveling expenses tracker project is a software development project that aims to create a tool that helps users to track their travel expenses. This can be a useful tool for individuals who travel frequently, as well as for businesses that need to track travel expenses for their employees.

Traveling expenses trackers can be simple or complex, depending on the needs of the user. Basic trackers typically allow users to record the date, amount, and category of each expense. More complex trackers may also allow users to track additional information, such as the purpose of the expense, the vendor, and the receipt number.

Traveling expenses trackers can be used to generate reports that can help users to understand their spending habits and identify areas where they can save money. For example, a user may generate a report that shows them how much they spend on airfare, hotels, and meals each month. This information can then be used to make informed decisions about future travel plans.

Traveling expenses trackers can also be used to improve compliance with company travel policies. For example, a company may require its employees to submit all travel expenses for approval before they are reimbursed. A traveling expenses tracker can make it easy for employees to submit their expenses for approval and for managers to track and approve expenses.

Overall, a traveling expenses tracker project can be a valuable tool for both individuals and businesses. By tracking travel expenses, users can gain a better understanding of their spending habits, identify areas where they can save money, and improve compliance with company travel policies.

MOTIVATION

- **Save money:-** By tracking your expenses, you can see where your money is going and identify areas where you can cut back. For example, if you realize that you're spending too much on food or transportation, you can make changes to your spending habits.
- **Stay on budget:-** If you have a travel budget, tracking your expenses can help you stay on track. You can see how much money you're spending each day and make adjustments as needed.
- **Get reimbursed:-** If you travel for work, you may be able to get reimbursed for your expenses. Tracking your expenses can make it easier to submit your reimbursement claims.
- **Plan future trips:** When you have a record of your past travel expenses, you can use that information to plan future trips. You'll know how much money you need to budget for and what to expect in terms of costs.

PROBLEM STATEMENT

- **Manual Expense Tracking:** Current methods often involve manually recording expenses, which is tedious and error-prone.
- **Expense Categorization:** Properly categorizing expenses can be challenging, especially for international trips with varying currencies and tax structures.
- **Expense Reporting:** Preparing accurate and timely expense reports can be time-consuming and frustrating.
- **Expense Insights:** Limited visibility into spending patterns and travel costs hinders informed decision-making for future trips.

OBJECTIVES

- **To Accurately track all travel expenses:-** This includes both direct expenses, such as transportation and accommodation, and indirect expenses, such as meals and incidentals.
- **To Identify areas where costs can be reduced:-** By tracking spending patterns and trends, organizations and individuals can identify areas where they can save money on travel.
- **To Improve compliance with travel policies:-** An expense tracker can help employees to comply with company travel policies, such as by providing automatic reminders and approvals.
- **To Reduce the administrative burden of expense reporting:-** By automating the expense reporting process, an expense tracker can save employees and managers time and effort.
- **To Provide real-time insights into travel spending:-** An expense tracker can provide organizations and individuals with real-time insights into their travel spending, which can help them to make better financial decisions.

GOALS

- **To Develop a Web Application:-** Create a responsive web application accessible from various devices and browsers.
- **To Design a Mobile Application:-** Build a mobile app compatible with both Android and iOS platforms.
- **To Currency Conversion Integration:-** Integrate a reliable currency conversion API to provide accurate and up-to-date exchange rates.
- **To Expense Tracking System:-** Implement an organized system for recording, categorizing, and managing travel expenses.
- **To Reporting and Data Analysis:-** Develop comprehensive reporting tools and data analysis features to assist users in making informed financial decisions.

LITERATURE REVIEW

Introduction:-

- This paper discusses the challenges and opportunities of travel expense tracking in the age of big data. The authors argue that big data can help organizations to improve their travel expense tracking in a number of ways, such as by helping to detect fraud, identify areas of overspending, and optimize travel policies.

1) This paper reviews the current practices and challenges of travel expenses tracking. The authors identify three main challenges: (1) the lack of a standardized approach to tracking travel expenses, (2) the difficulty of tracking expenses incurred in different currencies, and (3) the time-consuming nature of manual expense tracking.
2) The authors also review a number of existing travel expense tracking solutions, including manual methods, spreadsheets, and dedicated software applications. They conclude that dedicated software applications offer the best solution for travel expense tracking, as they provide a number of features that can help to automate the process and make it more efficient.
3) This paper reviews the literature on travel expenses management in the digital age. The authors identify a number of trends and developments in this area, including the increasing use of mobile devices and cloud-based computing.
4) The authors also discuss a number of the challenges that organizations face in managing travel expenses, such as fraud and compliance. They conclude that digital travel expense management solutions can help organizations to overcome these challenges and improve their travel expense management processes.

5) The authors found that the best travel expense tracking app for users will depend on their individual needs and preferences. However, they did identify a few apps that stood out for their overall performance, including Expensify, Concur, and Zoho Expense

Conclusion:-

- These five research papers provide a good overview of the current state of the art in travel expenses tracking. The papers highlight the key challenges and opportunities in this area, and they discuss a number of the latest technologies that are being used to improve travel expense tracking.

SCOPE

- **Track all travel expenses:** This includes transportation costs, accommodation, food, activities, and other incidentals.
- **Allow users to categorize their expenses:** This will help them to identify areas where they can save money.
- **Generate reports:** Users should be able to generate reports on their travel expenses, by category, date range, or other criteria.
- **Support multiple currencies:** The expense tracker should be able to handle multiple currencies, so that users can track their expenses accurately, regardless of where they are traveling.
- **Be easy to use:** The expense tracker should be easy to use and navigate, even for users who are not tech-savvy.
- **Be accessible on multiple devices:** The expense tracker should be accessible on multiple devices, including smartphones, tablets, and laptops.
- **Be secure:** The expense tracker should use robust security measures to protect user data.
- **Be compliant with all relevant regulations:** The expense tracker should be compliant with all relevant regulations, such as those governing data privacy and security.

LIMITATIONS

- **Accuracy:** The accuracy of the tracker depends on the user's input of expenses. If the user forgets to enter an expense or enters an incorrect amount, the tracker will not be accurate.
- **Completeness:** The tracker may not be able to track all types of travel expenses, such as mileage reimbursement or per diem payments.
- **Multilingual support:** The tracker may not be available in multiple languages. This can be a limitation for users who are traveling to a country where they do not speak the language.
- **Security:** The tracker may not be secure enough to protect the user's financial data.
- **Integration:** The tracker may not be integrated with other financial software, such as accounting software or personal finance software. This can make it difficult to reconcile the user's travel expenses with their overall financial picture.
- **Ease of use:** The tracker may be difficult to use. This can be a limitation for users who are not tech-savvy.

EXISITING ANALYSIS

Existing System

- Identify the needs of the users. What features are important to them? How do they want to be able to track their expenses? Once you have a good understanding of the user needs, you can start to design the system.
- Choose the right technology. There are many different technologies that can be used to develop a traveling expenses tracker. You will need to choose a technology that is compatible with your existing system and that meets the needs of the users.
- Design the database. The database will store all of the information about the traveling expenses, such as the date, amount, category, and receipt image.
- Develop the user interface. The user interface is what the users will interact with to enter and view their expense data. It should be easy to use and navigate.
- Integrate the system with the existing system. The traveling expenses tracker should be integrated with the existing system so that the data can be shared between the two systems.
- Test and deploy the system. Once the system is developed, it is important to test it thoroughly to make sure that it works as expected. Once the system is tested, you can deploy it to the users.

Scope of Existing System

- **Identify the existing system:** What system is currently being used to track travel expenses? Is it a manual system, such as spreadsheets or paper forms, or is it an automated system?
- **Identify the requirements for the new tracking system:** What features are needed in the new system? For example, does the new system need to be able to track mileage, tolls, parking, and other expenses? Does it need to be able to generate reports for reimbursement purposes?
- **Design the new tracking system:** Once the requirements have been identified, the new tracking system can be designed. This includes developing a database schema, creating user interfaces, and designing the workflow for tracking and reimbursing expenses.
- **Implement the new tracking system:** Once the design is complete, the new tracking system can be implemented. This may involve developing new software, integrating with existing systems, and migrating data from the old system to the new system.
- **Test and deploy the new tracking system:** Once the new tracking system has been implemented, it should be thoroughly tested to ensure that it meets all of the requirements. Once testing is complete, the new tracking system can be deployed to users.

Limitations of Existing System

- **Identify the existing system:** What system is currently being used to track travel expenses? Is it a manual system, such as spreadsheets or paper forms, or is it an automated system?
- **Identify the requirements for the new tracking system:** What features are needed in the new system? For example, does the new system need to be able to track mileage, tolls, parking, and other expenses? Does it need to be able to generate reports for reimbursement purposes?
- **Design the new tracking system:** Once the requirements have been identified, the new tracking system can be designed. This includes developing a database schema, creating user interfaces, and designing the workflow for tracking and reimbursing expenses.
- **Implement the new tracking system:** Once the design is complete, the new tracking system can be implemented. This may involve developing new software, integrating with existing systems, and migrating data from the old system to the new system.
- **Test and deploy the new tracking system:** Once the new tracking system has been implemented, it should be thoroughly tested to ensure that it meets all of the requirements. Once testing is complete, the new tracking system can be deployed to users.

• Project Perspective Features

- **User Authentication**: User registration and login to access the system securely. User roles (e.g., employee, manager, admin) with varying levels of access and privileges.
- **Expense Entry:** Ability for users to input travel expenses, including date, purpose, location, and description.Support for various expense categories (e.g., transportation, accommodation, meals). Attach receipts or documents related to expenses.
- **Expense Approval Workflow:** Workflow for expense approval, including submission, review, and approval by authorized personnel. Notification system to alert users when an expense report requires their action.
- **Expense Categorization and Tags:** Categorization of expenses for easier tracking and reporting (e.g., client-related, project-related, personal).
- **Expense Tracking and Reporting:** View and search expenses by date, category, or other custom criteria. Generate expense reports for specific time periods or projects. Export expense data to various formats (e.g., PDF, Excel).

Stakeholders

- **Employees:** Employees are the ones who will be using the tracker to submit their travel expenses. They have a vested interest in ensuring that the tracker is easy to use and accurate, so that they can get their reimbursements processed quickly and efficiently.
- **Managers:** Managers are responsible for approving employee travel expenses. They need to be able to easily see which expenses have been submitted, review them for accuracy, and approve or reject them as needed.
- **Accounting:** Accounting is responsible for processing employee travel reimbursements. They need to be able to easily import expense data from the tracker into their accounting system.
- **Finance:** Finance is responsible for tracking the overall budget for travel expenses. They need to be able to see how much money is being spent on travel each month and year, and identify any areas where costs can be reduced.

Requirement Analysis

Functinal Requirement

- **User Registration and Authentication:** Users should be able to register and log in securely. Passwords must be stored and transmitted securely.
- **Expense Entry:** Users should be able to enter various types of travel expenses (e.g., transportation, accommodation, meals, etc.). Users should be able to specify details for each expense (e.g., date, category, amount, vendor, receipt attachment).
- **Expense Categorization:** The system should allow users to categorize expenses into predefined categories (e.g., "Business," "Personal"). Users may need to add custom categories.
- **Expense Tracking:** The system should provide a dashboard or summary of total expenses. Users should be able to view expenses within a specified date range.

Performance Requirement

- **Response Time:** The system should respond quickly to user interactions (e.g., expense entry, report generation).
- **Scalability:** The system should handle a growing number of users and expenses without significant performance degradation.
- **Data Storage:** Efficiently store and retrieve expense data.

Security Requirement

- **Data Encryption:** Use encryption for data at rest and data in transit to protect user information and expense details.
- **Authentication and Authorization:** Implement a role-based access control system to ensure that users can only access their own data.
- **Compliance:** Comply with data protection regulations (e.g., GDPR, HIPAA) if applicable.
- **Password Policy:** Enforce strong password policies and provide a password reset mechanism.
- **Session Management:** Implement secure session management to protect against session hijacking.
- **Security Auditing:** Implement auditing and logging mechanisms to track any suspicious activities.

IMPLEMENTATION DETAILS

Software/Hardware Specifications

PROCESSOR TYPE	Intel Core i3 or AMD Ryzen 3 above
SYSTEM RAM	2.00GB and Above
INPUT DEVICE	Basic Keyboard AND Touch Pad
OUTPUT DEVICE	Standard Color Monitor
OPERATING SYSTEM	Windows 7,8,8.1,10,11
FRONT END	HTML, CSS, JAVASCRIPT,BOOTSTRAP
BACK END	My SQL, Node JS

OUTPUTS AND REPORT TESTING

Test Plan

- **Adding a Travel Expense**
  - Verify that the user can add a new travel expense to the application.
  - Verify that the user can specify the following details for the travel expense:
    - Date
    - Trip name
    - Amount
    - Type of Expenses
  - Verify that the travel expense is saved to the database successfully.
- **Generating a Report on Travel Expenses**
  - Verify that the user can generate a report on travel expenses for a specified date range.
  - Verify that the report includes the following information for each travel expense:
    - Date
    - Amount
    - Type of Expenses

Black Box Testing

- **Test case 1:**
  - Input: Enter a valid date range for a travel expense report.
  - Expected output: The application should display a list of all travel expenses that occurred within the specified date range.
- **Test case 2:**
  - Input: Enter an invalid date range for a travel expense report.
  - Expected output: The application should display an error message indicating that the date range is invalid.
- **Test case 3:**
  - Input: Enter a valid travel expense amount.
  - Expected output: The application should calculate the total travel expense amount correctly.
- **Test case 4:**
  - Input: Enter an invalid travel expense amount (e.g., a negative number).
  - Expected output: The application should display an error message indicating that the travel expense amount is invalid.
- **Test case 5:**
  - Input: Enter a valid travel expense category (e.g., airfare, hotel, meals).
  - Expected output: The application should save the travel expense category correctly.

Data Validation Test Cases

- **Test case 1:**
  - Input: Enter a valid date for a travel expense.
  - Expected output: The application should accept the date and store it in the database.
- **Test case 2:**
  - Input: Enter an invalid date for a travel expense (e.g., a date in the future or a date before the user's start date).
  - Expected output: The application should reject the date and display an error message to the user.
- **Test case 3:**
  - Input: Enter a valid travel expense amount.
  - Expected output: The application should accept the amount and store it in the database.
- **Test case 4:**
  - Input: Enter an invalid travel expense amount (e.g., a negative number or a blank field).
  - Expected output: The application should reject the amount and display an error message to the user.
- **Test case 5:**
  - Input: Enter a valid travel expense category (e.g., airfare, hotel, meals).

White Box Testing

Test Case 1:

- Test Objective: Verify that the application allows users to create new travel expenses entries.
- Steps:
    1. Launch the application and log in.
    2. Click on the "New Travel Expense" button.
    3. Enter the following information:
        - Date of travel
        - Type of expense (e.g., transportation, accommodation, food, etc.)
        - Amount
        - Currency
    4. Click on the "Save" button.
- Expected Result: The new travel expense entry should be saved successfully and displayed in the list of travel expenses.

Test Case 2:

- Test Objective: Verify that the application allows users to edit existing travel expenses entries.
- Steps:
    1. Launch the application and log in.

2. Click on an existing travel expense entry.
3. Make the necessary changes.
4. Click on the "Save" button.

- Expected Result: The changes to the travel expense entry should be saved successfully.

Test Case 3:

- Test Objective: Verify that the application allows users to delete travel expenses entries.
- Steps:
    1. Launch the application and log in.
    2. Click on a travel expense entry.
    3. Click on the "Delete" button.
    4. Confirm the deletion.
- Expected Result: The travel expense entry should be deleted successfully.

Test Case 4:

- Test Objective: Verify that the application calculates the total travel expenses accurately.
- Steps:
    1. Launch the application and log in.
    2. Enter multiple travel expenses entries.
    3. Click on the "Calculate Total" button.

- Expected Result: The total travel expenses should be calculated accurately and displayed in the application.

Test Case 5:

- Test Objective: Verify that the application allows users to export their travel expenses data to a CSV file.
- Steps:
    1. Launch the application and log in.
    2. Click on the "Export" button.
    3. Select the "CSV" file format.
    4. Click on the "Save" button.
- Expected Result: The travel expenses data should be exported to a CSV file successfully.

Functional Validation Test Cases And Result

Test case 1:

Objective: Verify that a user can create a new travel expense record.

Steps:

1. Log in to the travelling expenses tracker application.
2. Click on the "Create new travel expense" button.
3. Enter the following information:
    - Travel date range
    - Destination city
    - Expense type
    - Amount spent
4. Click on the "Save" button.

Expected result: The new travel expense record should be created successfully.

Actual result: The new travel expense record was created successfully.

Test case 2:

Objective: Verify that a user can update an existing travel expense record.

Steps:

1. Log in to the travelling expenses tracker application.

2. Click on the "Edit" button next to the travel expense record that you want to update.
3. Make the necessary changes.
4. Click on the "Save" button.

Expected result: The travel expense record should be updated successfully.

Actual result: The travel expense record was updated successfully.

Test case 3:

Objective: Verify that a user can delete a travel expense record.

Steps:

1. Log in to the travelling expenses tracker application.
2. Click on the "Delete" button next to the travel expense record that you want to delete.
3. Click on the "Confirm" button.

Expected result: The travel expense record should be deleted successfully.

Actual result: The travel expense record was deleted successfully.

Test case 4:

Objective: Verify that a user cannot create a new travel expense record with a future travel date.

Steps:

1. Log in to the travelling expenses tracker application.
2. Click on the "Create new travel expense" button.
3. Enter the following information:
    - Travel date range (starting date in the future)
    - Destination city
    - Expense type
    - Amount spent
4. Click on the "Save" button.

Expected result: The user should receive an error message indicating that they cannot create a travel expense record with a future travel date.

Actual result: The user received an error message indicating that they cannot create a travel expense record with a future travel date.

Test case 5:

Objective: Verify that a user cannot create a new travel expense record with a negative amount spent.

Steps:

1. Log in to the travelling expenses tracker application.
2. Click on the "Create new travel expense" button.
3. Enter the following information:
    - Travel date range
    - Destination city

- Expense type
- Negative amount spent

4. Click on the "Save" button.

- **Results:**

All of the test cases passed successfully, which indicates that the travelling expenses tracker application is functioning as expected.

Conclusion And Recommendations

Conclusion And Recommendations

- **Data accuracy:** It is essential that the system is able to accurately track all travel expenses, in order to provide businesses with a reliable overview of their spending.
- **Ease of use:** The system should be easy to use for both employees and managers, in order to encourage adoption and ensure that all expenses are recorded accurately and on time.
- **Flexibility:** The system should be flexible enough to accommodate different types of travel expenses and business policies.
- **Security:** The system must be secure enough to protect sensitive financial data from unauthorized access.
- **Develop a detailed user guide:** The user guide should provide clear instructions on how to use the system to record and submit travel expenses. It should also include information on how to approve and reimburse expenses.
- **Collect feedback from users:** This feedback can be used to improve the system's usability and functionality.

Future Scope

Future Scope

- **Integration with artificial intelligence (AI) and machine learning (ML):** AI and ML can be used to automate many tasks associated with expense tracking, such as data entry, categorization, and fraud detection. This can free up employees to focus on more strategic tasks and save businesses money.
- **Use of blockchain technology:** Blockchain can be used to create a secure and tamper-proof record of all travel expenses. This can help to reduce fraud and improve auditability.
- **Real-time expense tracking:** With the advent of 5G and other high-speed internet technologies, it will be possible to track travel expenses in real time. This can help businesses to identify and address potential problems early on.
- **Personalized expense tracking:** AI and ML can be used to create personalized expense tracking experiences for each employee. This can help employees to better understand and manage their spending.
- **Integration with other financial systems:** Expense tracking software can be integrated with other financial systems, such as ERP systems and accounting software. This can help businesses to streamline their financial processes and improve reporting.
- **AI-powered expense categorization:** AI can be used to automatically categorize travel expenses, such as flights, hotels, meals, and ground
